PROFESSIONAL SUMMARY

MCA graduate with a solid foundation in Data Structures & Algorithms and hands-on programming experience in Python, Java, and JavaScript. Internship and project experience building and debugging full-stack applications, working directly with REST APIs, authentication flows, and admin workflows — reproducing issues, validating features, and iterating until they worked reliably. Comfortable with Git-based version control and Agile team collaboration. Strong problem-solving skills and attention to detail, with a genuine interest in building a career in software quality engineering, test automation, and CI/CD practices.

TECHNICAL SKILLS

- Programming: Python, Java, JavaScript, PHP, SQL
- Software Fundamentals: Data Structures & Algorithms, OOP, DBMS, SDLC
- Testing & Debugging: Manual feature validation, issue reproduction, debugging, REST API development and validation
- Collaboration: Git, GitHub, Agile methodologies, code reviews, cross-functional teamwork
- Backend & Data: Node.js, Express.js, MySQL, MongoDB, SQL
- Additional: Pandas, NumPy, TensorFlow, Keras — applied in model testing and iteration

WORK EXPERIENCE

Junior Web Development Intern | *Eduainer (PAT Technologies Private Limited)* 02/2026 – 05/2026 | Remote

- Completed a structured 3-month internship contributing to live projects, applying Agile methodologies and industry-standard software development workflows.
- Built and validated REST APIs and JWT authentication flows, debugging issues across the stack and confirming fixes before features shipped.
- Collaborated closely with the development team to clarify requirements, reproduce reported bugs, and deliver project milestones on schedule.

PROJECT EXPERIENCE

AI-Powered Real Estate System | *Developer* | *React.js, Node.js, Express.js, MongoDB, JavaScript, JWT, Firecrawl, GitHub Models (LLM)* |

- Built and manually tested property search, listings, appointment booking, and dashboard workflows end to end, tracking down and fixing defects across user roles.
- Designed a role-based admin system for property approval and user management, validating permission logic and edge cases through repeated test scenarios.
- Integrated AI-powered recommendations (Firecrawl, GitHub Models LLM), testing outputs against expected results to catch inconsistencies.

Image Recognition and Retrieval System | *Student Project* | *Python, TensorFlow, Keras, Pandas, NumPy* |

- Trained a deep learning model and validated its outputs through repeated test runs, systematically tuning parameters based on observed failures.
- Reproduced and root-caused recognition errors on degraded input images to improve model accuracy.
- Documented test methodology, assumptions, and results for reproducibility.

MERN E-Commerce Website | *Intern* | *MongoDB, Express.js, React.js, Node.js, Stripe, JWT, Cloudinary* |

- Built and tested core user flows — registration, login, product browsing, and order management — verifying functionality across the application.
- Implemented and validated JWT-based authentication, using Git for version control and iterative debugging throughout development.

EDUCATION

Master of Computer Application (MCA)

2024 – 2026

Bangalore Institute of Technology, Bangalore — CGPA: 9.05

Bachelor of Computer Application (BCA)

2021 – 2024

Bhandarkar's Arts and Science College, Kundapura — CGPA: 7.61

CERTIFICATIONS

- Introduction to Generative AI
- Oracle Database Administration from Zero to Hero — L&T EduTech
- ACE Coding Interviews: DSA Mastery with Java — ExcelR EdTech
- Introduction to Research Methodology
- Effective Use of AI in Marketing — AgileSpace Digital

LANGUAGES

English, Hindi, Kannada
